

VINCENT AYN DE CASTRO

Austin, TX | (737) 203-1105 | ayndecastro@gmail.com | [LinkedIn](#) | [Github](#)

PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience designing data pipelines, architecting enterprise AI automation solutions, and building secure, cloud-based applications. Proven track record of implementing LLM-backed tools, prompt engineering, and automated evaluation frameworks alongside robust Identity and Access Management (IAM) systems. Proficient in Python, JavaScript, and SQL, with a strong focus on driving organizational efficiency and system performance through modern DevOps and cloud technologies.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, SQL, HTML/CSS
- **AI & Data Technologies:** LLM-backed tools, Prompt Engineering, Automated Evals, Data Pipeline Development, Database Design, ETL Processes
- **Frameworks & Libraries:** ReactJS, Node.js, Flask, RESTful APIs
- **Cloud, DevOps & Security:** Docker, Azure Portal, Azure AI Services, Authentik, Microsoft Entra ID, CI/CD
- **Automation & Tools:** Power Automate, SharePoint, Microsoft 365 Suite (Excel/Word), Git, Vite, Power BI, MCP Server
- **Databases:** MySQL, MongoDB, DB2, PostgreSQL

PROFESSIONAL EXPERIENCE

RENAISSANCE SYSTEMS INC | Austin, TX

Software Developer | Aug 2022 - Present

- **Architected and deployed an AI-assisted proposal generator** leveraging Microsoft Copilot, Power Automate, and SharePoint, significantly accelerating the sales engineering pipeline.
- **Designed and integrated an automated pricing tool calculator** within enterprise workflows, utilizing the Microsoft 365 suite to eliminate manual data entry errors and reducing manual workload by 50% across IT, sales, and marketing departments.
- **Implemented secure Identity and Access Management (IAM)** infrastructure across internal IT tools utilizing **Authentik** and **Microsoft Entra ID** to enforce modern OAuth/SAML authentication protocols.
- **Designed and implemented data processing pipelines** that improved document extraction accuracy by 90% and enhanced overall processing efficiency.
- **Developed reusable React components** adopted across dozens of custom enterprise applications, improving UI consistency and UI development velocity.
- **Managed automation services processing 100,000+ documents daily**, maintaining high data integrity and minimal system downtime.

BAND BARRACKS STUDIOS | Houston, TX

Software Developer | Mar 2020 - Mar 2025

- **Co-founded the project and architected a distributed Microservice system** featuring proprietary APIs and automation solutions hosted entirely in the cloud.

- **Automated 80%+ of core operations**, including customer onboarding, payment processing, ID verification, automated email pipelines, and real-time, room-level IoT studio access allowing the business to run fully autonomous cutting operation cost by 70%.
- **Created and maintained robust database pipelines** to ingest, process, and analyze data from third-party platforms, driving data-backed corporate strategy.
- **Designed microservices for asynchronous data automation tasks** using containerized Docker solutions, increasing system availability and decoupling critical operations.
- **Built interactive operational dashboards using Power BI** to visualize key business metrics, churn analysis, and financial performance for stakeholders.

KEY PROJECTS

AI-Assisted Proposal Generator & Pricing Tool | RENAISSANCE SYSTEMS INC

- Engineered an end-to-end automation platform that utilizes Copilot and Power Automate to dynamically generate client-facing proposals into Word and Excel formats.
- Secured the application platform by configuring federation and single sign-on (SSO) through Authentik and Microsoft Entra ID.

Importer Service | RENAISSANCE SYSTEMS INC

Software Developer | Aug 2023 - Mar 2024

- Led the design and implementation of a data processing service that automatically categorizes documents for OCR scanning.
- Integrated Large Language Models (LLMs) to enhance document processing, significantly improving accuracy in data extraction.
- Developed an automated pipeline that processes documents daily with LLM-powered validation and error correction.
- Implemented classification algorithms that reduced processing time while maintaining high data quality.
- Created feedback systems where model outputs continuously improved performance through iterative learning.

Studio Booking Automation | BAND BARRACKS STUDIOS

Software Developer | Mar 2020 - May 2021

- Implemented automated data collection for studio sessions and customer interactions.
- Integrated third-party APIs for identity verification, enhancing data security and validation.
- Developed a system that improved operational efficiency by automating previously manual processes.

EDUCATION

Austin Community College | Austin, TX

Certificate: Computer Information Technology: Computer Programming-Data Science | Jul 2021

University of Texas | Austin, TX

Certificate: Full-Stack Web Development Coding Bootcamp | Jan 2019
