PROFESSIONAL SUMMARY

Full Stack Software Engineer with 5+ years of experience designing data pipelines, architecting enterprise AI automation solutions, and building secure, cloud-based applications. Proven track record of implementing LLM-backed tools, prompt engineering, and automated evaluation frameworks alongside robust Identity and Access Management (IAM) systems. Proficient in Python, JavaScript, and SQL, with a strong focus on driving organizational efficiency and system performance through modern DevOps and cloud technologies.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, SQL, HTML/CSS
- **AI & Data Technologies:** LLM-backed tools, Prompt Engineering, Automated Evals, Data Pipeline Development, Database Design, ETL Processes
- **Frameworks & Libraries:** ReactJS, Redux, Node.js, Flask, Django, RESTful APIs
- **Cloud, DevOps & Security:** Docker, Kubernetes, Azure Portal, Azure AI Services, Authentik, Microsoft Entra ID, Datadog, Graylog, CI/CD
- **Automation & Tools:** Power Automate, SharePoint, Microsoft 365 Suite (Excel/Word), Git, Vite, Power BI, Google Analytics, MCP Server
- **Databases:** MySQL, MongoDB, DB2, PostgreSQL

PROFESSIONAL EXPERIENCE

RENAISSANCE SYSTEMS INC | Austin, TX

Full Stack Software Engineer | Aug 2022 – Present

- Led end-to-end design and deployment of an IT automation suite, integrating Microsoft Copilot, Power Automate, and SharePoint to build a unified AI proposal generator that dynamically compiles client-facing deliverables and cuts manual sales engineering work by over 50%.
- Led the implementation of a secure Identity and Access Management (IAM) infrastructure across internal tools via Authentik and Microsoft Entra ID, enforcing modern OAuth/SAML protocols while ensuring seamless backward compatibility with legacy LDAP systems.
- Designed and scaled an Intelligent Document Processing (IDP) service handling 100,000+ files daily; integrated LLMs, automated container scaling via Kubernetes, and iterative learning loops to achieve a 90% accuracy boost in OCR extraction.
- Core member of a team that engineered enterprise web features, including a full-stack Affidavit Filing Portal with dynamic form adaptation, a proprietary onboarding LMS, and highly reusable ReactJS components that cut UI development duplication by 50%.
- Greatly contributed to the development of a data consolidation and observability platform using Datadog and Graylog to monitor and visualize performance across a distributed system.

BAND BARRACKS STUDIOS | Houston, TX

Full Stack Software Engineer | Mar 2020 – Mar 2025

- Co-founded the project and engineered a cloud-hosted, distributed microservices infrastructure with proprietary APIs to completely automate core business operations.
- Designed an end-to-end studio booking automation system managing customer onboarding, payment processing, third-party ID verification, and real-time room-level IoT facility access, slashing operational overhead by 70%.

- Created and maintained robust database pipelines to ingest, clean, and analyze data from third-party platforms, providing leadership with interactive Power BI and Google Analytics dashboards to track churn and financial KPIs.
- Containerized application microservices using Docker to handle asynchronous data automation tasks, significantly increasing system availability and decoupling critical fault domains.

7QUBE | Chicago, IL

Software Engineer Intern | Mar 2021 – Jul 2021

- Developed reusable ReactJS components for a variety of internal dashboards, optimizing data visualization flow and frontend rendering efficiency.
- Built backend features and custom operational tools using Django, seamlessly integrating third-party APIs to power automated data campaigns.

EDUCATION

Austin Community College | Austin, TX

Certificate: Computer Information Technology (Computer Programming - Data Science) | Jul 2021

University of Texas | Austin, TX

Certificate: Full-Stack Web Development Coding Bootcamp | Jan 2019
